DETAILED ACTION

Allowable Subject Matter

1. Claims 1-8 are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Davidson (US 6,222,122), which discloses a method of making a sealed module comprising the steps of providing a housing open only at one end, dispensing a first quantity of potting material into said housing, inserting a circuit board having electronic components thereon into the housing, and curing said potting material. While the reference is silent as to the use of an electrical connector, such connectors are commonly included in a plurality of circuit board constructions, as shown for example by Chapman (US 5,392,510). In this instance, however, the electrical connector, as correctly argued by applicant, would not be shaped and sized to close the open end of the housing while retaining the circuit board entirely within the housing. In fact, the electrical connector would be positioned outside of the housing and would be exposed to harsh environmental conditions. One of ordinary skill in the art at the time of the invention would not have found it obvious to form the electrical connector in such a manner that it functions as the top or uppermost portion of the housing. This is particularly the case since the construction of Davidson includes an upper housing portion 26, 27.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
